EXP 10:

Software Requirements Prioritization using MoSCoW Analysis for Library Management System

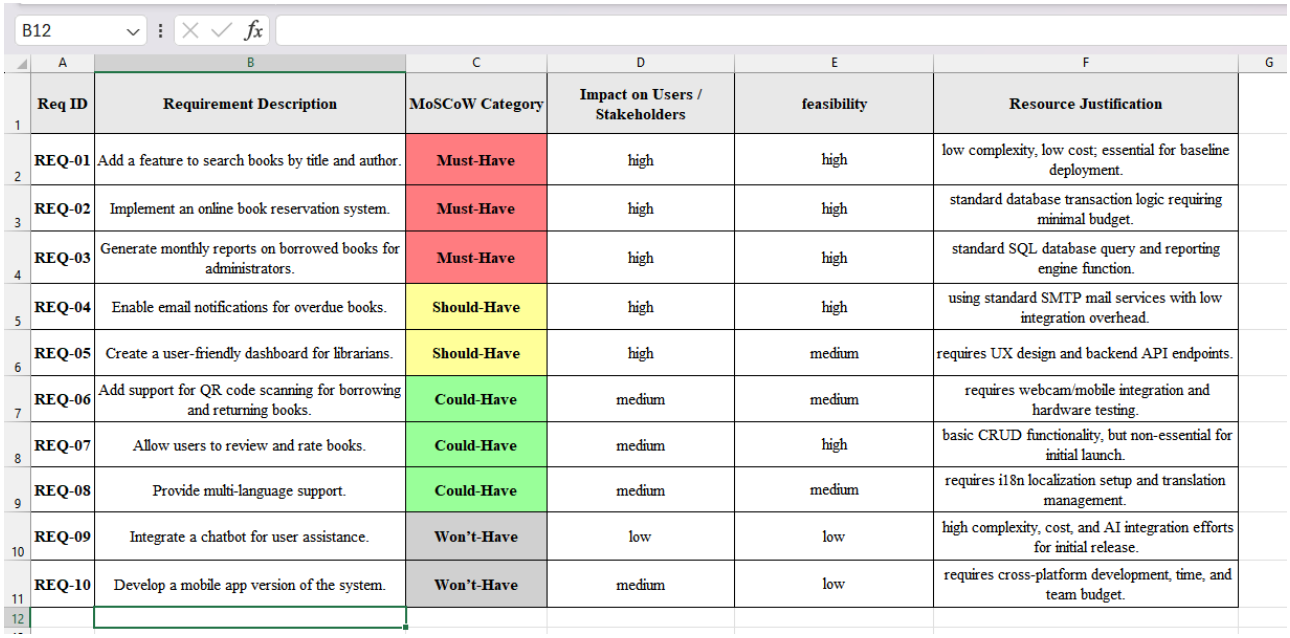

Aim:

To analyze, prioritize, and categorize the functional requirements of a Library Management System using the MoSCoW method based on user impact and feasibility constraints.

procedure:

- Open Spreadsheet: Launch Google Sheets or MS Excel and create a new blank sheet.
- Add Headers: Set Row 1 headers as: Req ID, Requirement Description, MoSCoW Category, Impact on Users, and Feasibility & Justification.
- List Requirements: Enter all 10 library system requirements into the table.
- Categorize Requirements: Assign each requirement to Must-Have, Should-Have, Could-Have, or Won't-Have based on operational need and feasibility.
- Add Justifications: Write a short explanation for each item detailing its user impact and technical effort.
- Format & Export: Apply bold headers, auto-fit columns, add text wrapping, and save or download as .xlsx or PDF for submission.

Outputs:

B12

	A	B	C	D	E	F	G
1	**Req ID**	**Requirement Description**	**MoSCoW Category**	**Impact on Users / Stakeholders**	**feasibility**	**Resource Justification**	
2	**REQ-01**	Add a feature to search books by title and author.	**Must-Have**	high	high	low complexity, low cost; essential for baseline deployment.	
3	**REQ-02**	Implement an online book reservation system.	**Must-Have**	high	high	standard database transaction logic requiring minimal budget.	
4	**REQ-03**	Generate monthly reports on borrowed books for administrators.	**Must-Have**	high	high	standard SQL database query and reporting engine function.	
5	**REQ-04**	Enable email notifications for overdue books.	**Should-Have**	high	high	using standard SMTP mail services with low integration overhead.	
6	**REQ-05**	Create a user-friendly dashboard for librarians.	**Should-Have**	high	medium	requires UX design and backend API endpoints.	
7	**REQ-06**	Add support for QR code scanning for borrowing and returning books.	**Could-Have**	medium	medium	requires webcam/mobile integration and hardware testing.	
8	**REQ-07**	Allow users to review and rate books.	**Could-Have**	medium	high	basic CRUD functionality, but non-essential for initial launch.	
9	**REQ-08**	Provide multi-language support.	**Could-Have**	medium	medium	requires i18n localization setup and translation management.	
10	**REQ-09**	Integrate a chatbot for user assistance.	**Won't-Have**	low	low	high complexity, cost, and AI integration efforts for initial release.	
11	**REQ-10**	Develop a mobile app version of the system.	**Won't-Have**	medium	low	requires cross-platform development, time, and team budget.	
12							

Result: Thus, All 10 requirements for the Library Management System were successfully analyzed, categorized, and documented in Google Sheets/Excel using the MoSCoW method. Each requirement was evaluated based on user impact and technical feasibility to establish a clear development priority list.
